

## EMODnet Physics

EASME/EMFF/2016/006 - Operation, development and maintenance  
of a European Marine Observation and Data Network  
EASME/EMFF/2016/1.3.1.2 – Lot 3/SI2.749411

Antonio  
Novellino | ETT

The European Marine Observation and Data Network (EMODnet) is financed by the European Union under Regulation (EU) No 509/2014 of the European Parliament and of the Council of 15 May 2014 on the European Maritime and Fisheries Fund.

## Outline

- Physics and Data Ingestion activities
- Data, metadata and products
- Progress on data management (HFR, river)
- Portal updates and products
- new M2M services (widget, ERDAPP, etc)
- Users and portal use

# EMODnet Physics & Data Ingestion

## Near Real Time

- 30 tide gauge stations, Italian TG network, ISPRA via GLOSS
- 4 fixed stations, 2 gliders, 2 turtles, 2 FB, SOCIB
- HFR data (Brest bay: Pointe de Brézellec- Pointe de Garchine), SHOM
- 23 Ferrybox (StenaLines), SMHI

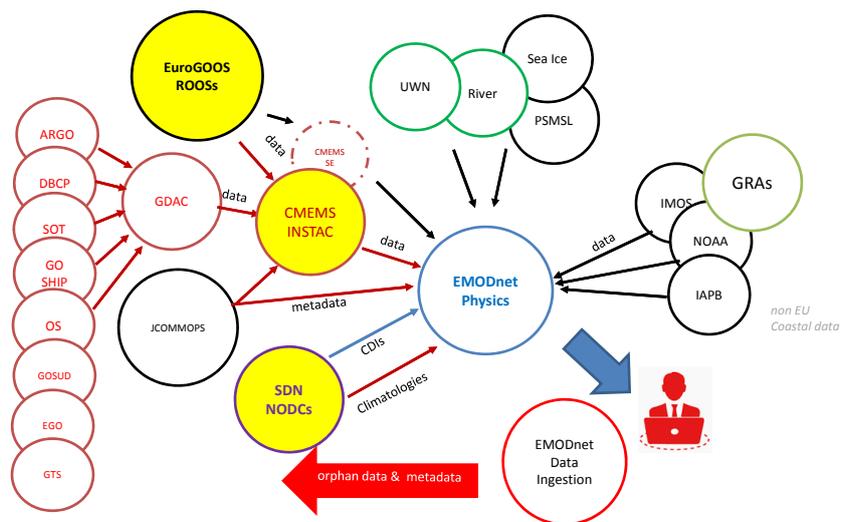

## Historical data

- >1100 sea mammals data, 2004 – 2015, MEOP DB
- 3 fixed buoys (Civitavecchia, Gaeta), 2012 -2017, Uni. Tuscia
- HFR data (Naples, Manfredonia, Trieste), CNR ISMAR, RITMARE prj.
- HFR data (MESA, VADE), 2014-2015, SMHI

# data management

## Data Collection, Metadata Compilation, Data Access and Products

## data management

### Near Real Time data/operational data

- Platform: fixed mooring, ferrybox, tide gauge, drifting buoy, ARGO, profiling mooring, HF Radar, ships
- Time dimension: Daily files, Monthly files aggregations, Rep long term files
- Metadata + Transport format: Netcdf (CF convention), csv
- Repositories: CMEMS INSTAC - EuroGOOS ROOS (6 assembly centres)  
Institutes\*  
GDAC/IOOS/AIMOS\*\*

### Historical validated data sets

- Platform: fixed stations (mooring, tide gauge)
- Time dimension: Depending on datasets (ranging from month to years)
- Metadata + Transport format: CDI + ODV4/Netcdf (CF)
- Repositories: CDI: centralized  
Datasets: NODC and SeaDataNet nodes (100 centres)

## data management

### HFR Data Production:

- **Data Production:** run HFR site or assemble HFR data
- **Quality control:** apply automatic quality controls that have been agreed at the EuroGOOS HFR TT. These procedures are defined by parameter, elaborated in coherence with international recommendations

### HFR Production Unit:

- **Acquire Data:** Gather available HF Radar data through collaboration with regional and national partners.
- **Data format and naming harmonization**
- **Validation/Assessment:** Assess the consistency of the data over a period of time and an area to detect data that are not coherent with their neighbors but could not be detected by automatic QC.

### HFR Distribution Unit:

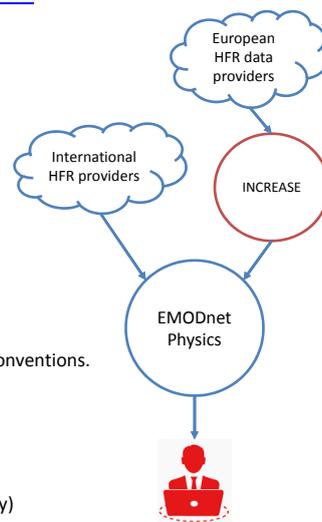

- **Distribution Unit:** assemble data into an integrated dataset and uniform catalogue, make the data available in NRT within the European infrastructures (EMODnet, CMEMS SE) and to the external users.

## HFR data management

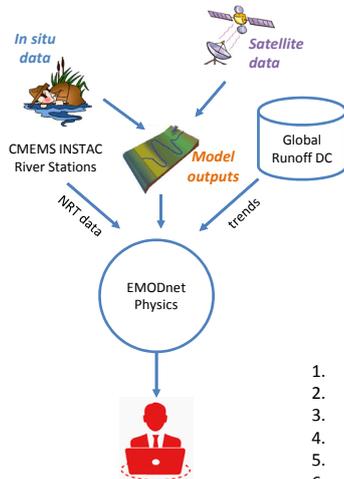

<http://thredds.cmems-increase.eu/threddsINCREASE/catalog.html>  
<http://thredds.emodnet-physics.eu/thredds/catalog.html>

- Data format
  - netCDF-4, CF 1.6
- Data infrastructure
  - THREDDS data server + CMEMS INSTAC naming conv
    - Last day - RR\_LATEST\_XX\_CODE\_YYYYMMDD.nc
    - Latest - RR\_LATEST\_XX\_CODE.nc
    - Monthly - RR\_YYYYMM\_XX\_CODE.nc
    - History - RR\_YYYY\_XX\_CODE.nc (e.g. IR\_2016\_TL\_HR\_BasqueHFR.nc)
  - SDN P09 data variable names
- metadata structure
  - Mandatory: CF-1.6 and OceanSITES
  - Recommended: INSPIRE and Unidata Dataset Discovery conventions.
  - Suggested: other relevant to the data
- QC flagging scheme
  - CMEMS INSTAC & OceanSites: QF [0-9]
- QC tests
  - QARTOD, independent from manufacturer
  - Level 2B (for radial velocity) and Level 3B (for total velocity)

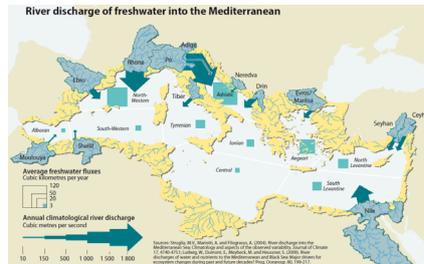

# River data management

Annual climatological discharge  $> 10 \text{ m}^3/\text{s}$ : Contribute to about half of the total inputs (Struglia et al., 2004; Ludwig et al., 2009)

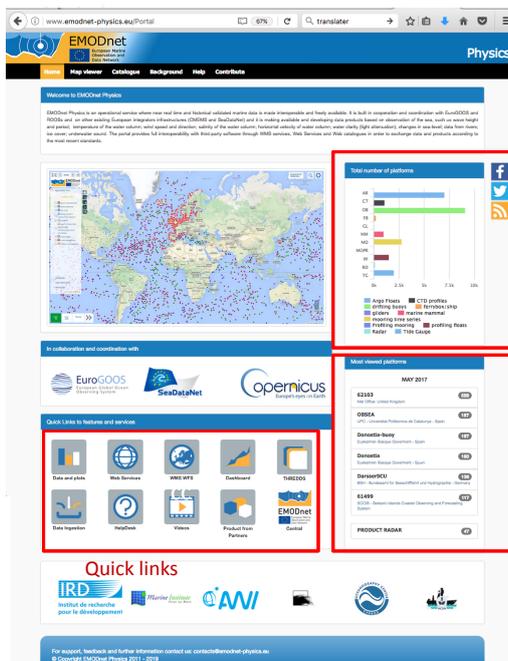

1. List of the rivers to be included (discharge/runoff  $> 10 \text{ m}^3/\text{s}$ )  $\rightarrow$  380 rivers
2. Inventory of the (operational) fixed platforms on those rivers
3. Definition of the data structure, file transport format, conventions
4. Focus on Level of water, river flow (also as computed by the level),
5. River platform page
6. Development of Total Suspended Matter (gridded) products (with trends)
7. Development of a model to compute the outflow of the river on the subsea basin (Hype like) at European level
8. Development of river climatology products (with trends)

## Considerations and planning

- Metadata and interoperability
  - device characteristics available together with data
  - SensorML, platform and hydrophone characteristics
  - Sampling frequency, hydrophone sensitivity, gain, quantization range, ...
  - Naming convention
- Data management
  - NRT stream - e.g. netcdf for handling the image (spectrogram vs time)
  - Storage of an acoustic sample per day (e.g. 5 min recording)
- Data transport format
  - Raw data in (pcm) wav files
  - overall hydrophone metadata in the file (e.g. the LIST-INFO chunk).
- Data processing
  - Daily background noise (soundscape) from the sample
  - **Impulsive noise levels** in 10Hz-10kHz band (i.e. # events  $> X \cdot \text{rms}$ )
  - **Monthly distribution of noise in two third octaves (centred on 63 and 125 Hz)**

## Portal development:

- **Landing page:** to give background information and links
- **Dynamic map:** to explore capacity, search for metadata and data
- **Platform page:** to pre-view and metadata and data, trends, and download data
- **Products page:** to pre-view and interact with operational data, data collections, climatologies,
- **Interoperability and M2M services:** to facilitate data and products uptake and further uses
- **Monitoring tools:** to monitor system and infrastructure performances, platform data and products uptake and use, and to report back to data providers
- **Help desk**

The screenshot shows the EMODnet Physics Portal interface. At the top, there is a navigation menu with links for Home, Map viewer, Catalogue, Background, and Help. Below the menu is a 'Welcome to EMODnet Physics' section with a brief introduction. The main content area includes a dynamic map of Europe showing data points, a bar chart titled 'Total number of platforms' with categories like AR, CT, IR, etc., and a 'Quick links to features and services' section with icons for Data and plots, Web Services, Web API, Dashboard, TMS2005, Data ingest, Platform, Video, Product use, and Catalogue. A 'Latest released platform' section lists various data sources like E3303, ORGA, Dannebrog, etc. The footer contains contact information and copyright details.

### Menu bar:

- Home: landing page and brief introduction to EMODnet Physics
- Map viewer: link to the dynamic map with datasets ([www.emodnet-physics.eu/map](http://www.emodnet-physics.eu/map))

### Operational Data

- Catalogue
  - o Products: link to the dynamic map with (plot) products (<http://www.emodnet-physics.eu/map/Products/V2/PRODUCTS.aspx>)
  - o Catalogue: sextant catalogue for products released by the EMODnet Physics partners (CMEMS and SeaDataNet)

### Background

- Help
  - o term of use
  - o QC/QA protocols
  - o User guide & legend
  - o Documents and services

### Data Use

- contribute
  - o Associate partners (alphabet order of the data contributors)
  - o How to contribute (introduction and links to EMODnet Data Ingestion)
  - o Near Real Time data exchange

Da: "Ouellet, Mathieu" <Mathieu.Ouellet@dfo-mpo.gc.ca>  
Data: 07 Mar 2017 11:28  
Oggetto: TR: Drifter beached on Grande-Maison Island  
A: "arnack@omni.ca"

As discussed earlier, the drifter was beached. It was a man you can see the EMODnet.

For the record, the location is: Search point 40,25,89,45

Hello Mathieu,  
Thank you for the email.

Best regards,  
Valérie

## Authenticated users

Wake up your data and join us

**EMODnet**  
European Marine Observation and Data Network

[www.emodnet.eu](http://www.emodnet.eu)

Your gateway to marine data in Europe

**Data policy:**

**Download without authentication:**

- Latest 60 days of operational data
- Operational data from platforms contributing to international programs (e.g. ARGO)
- Data already available free and open/explicit request form the provider (e.g. SOCIB)

**Download with authentication (CMEMS Service Level Agreement):**

- Data older than 60 days (European Coastal platforms)
- Reprocessed/delay mode data

**Download with authentication (SDN Service Level Agreement):**

- CDI - historical data hosted by NODCs
- some data may require negotiation/specific agreements

Processing Level	Description	Processing sub-Level	Definition
Level 0	raw data: Unprocessed instrument/payload data at full resolution including synchronisation methods (e.g. elimination of CTD up-down duplicates) and excluding communication artifacts	LEVEL 0	Reconstructed, unprocessed instrument/payload data at full resolution; any and all communications artifacts, e.g. synchronization frames, communications headers, duplicate data removed.
Level 1	Full resolution data reconstructed with calibration coefficients, geo and time referenced	LEVEL 1A	Reconstructed, unprocessed instrument data at full resolution, time-referenced and annotated with ancillary information, including radiometric and geometric calibration coefficients and georeferencing.
		LEVEL 1B	Level 1A data that have been processed to sensor units for next processing steps. Not all instruments will have data equivalent to Level 1B.
Level 2	Derived geophysical data processed with a minimum QC (e.g. gross range test)	LEVEL 2A	Derived geophysical variables at the same resolution and locations as the Level 1 source data.
		LEVEL 2B	Level 2A data that have been processed with a minimum set of QC.
Level 3	Data resampled regularly and with delayed mode QC applied (including climatology comparison).	LEVEL 3A	Variables mapped on uniform space-time grid scales, usually with some completeness and consistency
		LEVEL 3B	Level 3A data that have been processed with a minimum set of QC.
Level 4	Data quality assured from multiple campaign, measurements or model outputs.	LEVEL 4	Model output or results from analyses of lower level data, e.g. variables derived from multiple measurements
