

# Updates from Chemistry lot (MARE/2012/10)

*Alessandra Giorgetti – OGS – Italy*

*4th EMODnet Steering Committee Meeting, Ispra (VA, Italy), 1-2 July 2015*

## Status of chemical data within and outside EMD

Communication is started with **RSCs** and **national level** to include missing information within EMD, following the distributed network

## Data policy in SeaDataNet/EMODnet Chemistry

Per Data Access Restriction	Datasets
SeaDataNet licence	295.292
Unrestricted	256.538
by negotiation	90.552
no access	11.460
Academic	944
Licence	543
Moratorium	456
<b>TOT</b>	<b>655.785</b>

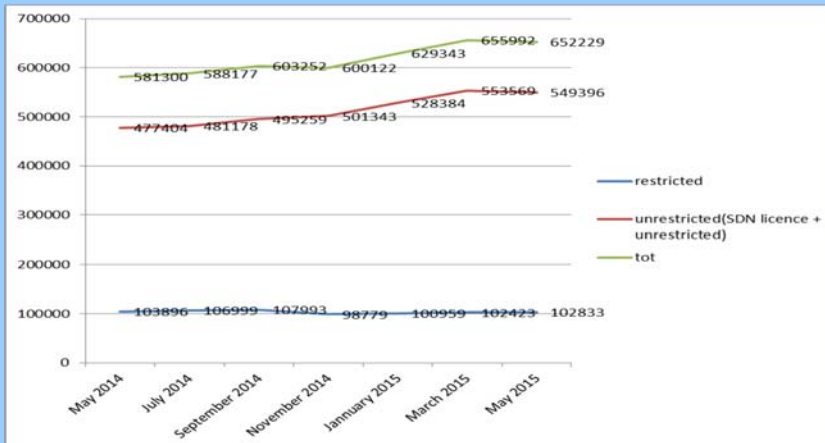

84 % of the data are “unrestricted”

Metadata and data products are freely available

15.8 % of the data are “restricted”

Data follows data policy settled by originators

With SDN/EMD Authorisation/Authentication/Access service **the user can be aware, negotiate** and agree the access to restricted data; **the originator can** standardize its information for **long-term safeguarding while keeping the ownership**

The number of restricted data is not eliminated but slowly decreasing as a consequence of the trust relationship built between data originators and NODCs

## Quality assessment for data and products

**Quality assessment** for EMD Chem is considered as a **key element** both in the **data collection** as well as in the **data products** generation

- Data are validated by the **originators**
- Data are validated by the **Data Centers**
- Data are validated globally, **at regional level**

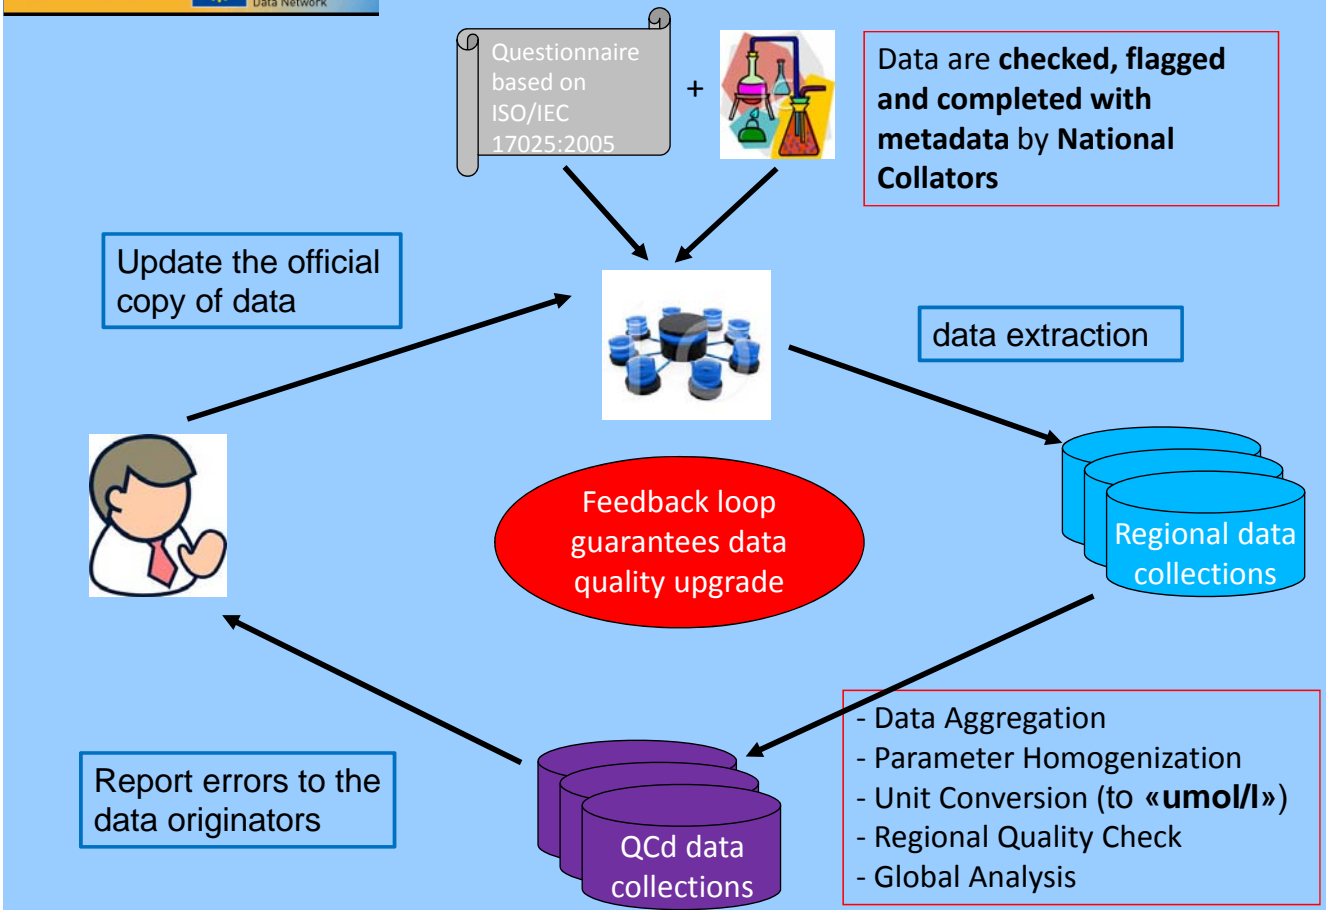

→ Regional QC buffers of data

DIVA (Data-Interpolating Variational Analysis) horizontal maps generated on top of regional QC data buffers

- Maps (PO<sub>4</sub>, NO<sub>3</sub>, SiO<sub>4</sub>) are validated by local experts
- Maps (PO<sub>4</sub>, NO<sub>3</sub>, SiO<sub>4</sub>) are validated by EMD community

→ EMD Chem products are reviewed during Expert WS

## Quality assessment for data and products

## Key progress updates: plan 3<sup>rd</sup> year

### Data collection focused on:

- Contaminants in all matrices by M27 = September 2015
- Chlorophyll-a, Oxygen, Organic Matter, pH, Alkalinity by M27 = September 2015

**Data harvesting** is underway and will close definitely on M28 = October 2015.

### Validation of regional data collections

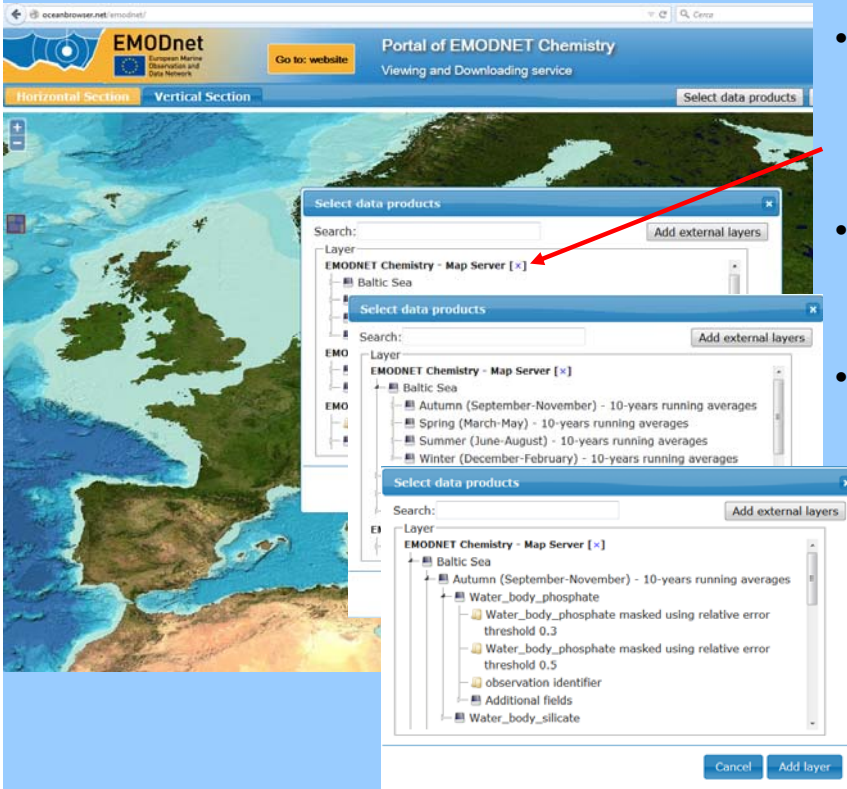

**DIVA maps** generation with 10-year moving window over 55 years, by season at identified vertical standard layers for:

- Total Phosphorus, Nox, Total Nitrogen, NH4 by M26 = August 2015
- Chlorophyll-a, Oxygen, Organic Matter, pH, Alkalinity by M34 = April 2015

in the **5 regions** (Baltic sea, North sea, Atlantic sea, Mediterranean sea, Black sea)

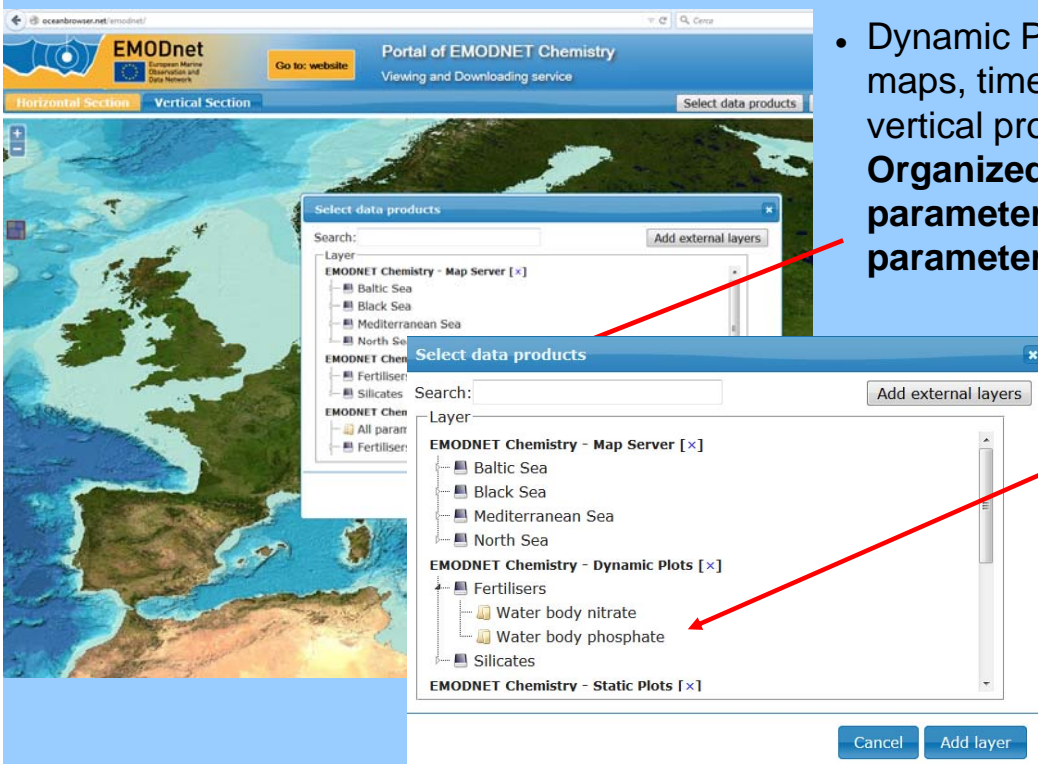

The **dynamic visualization** as OGC services are available for nutrients in the 5 regions. Performances should be improved (software, cloud environment). New regional collections are expected by M34.

## Viewing service updates: Map Server

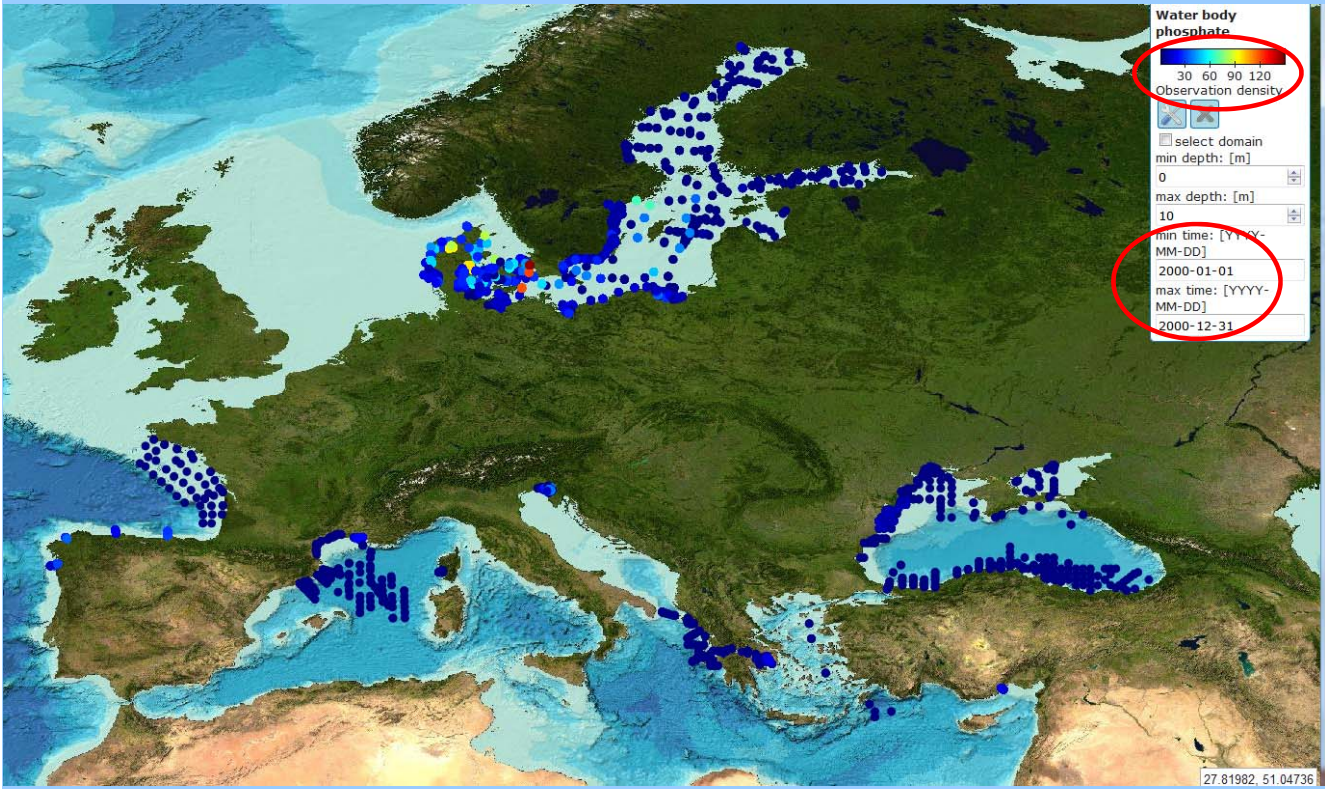

- Map Server: DIVA maps **Organized by domain, by season and by variable**
- Gridded field are masked by expected error
- Full field available in “Additional fields”

## Viewing service updates: Dynamic Plots

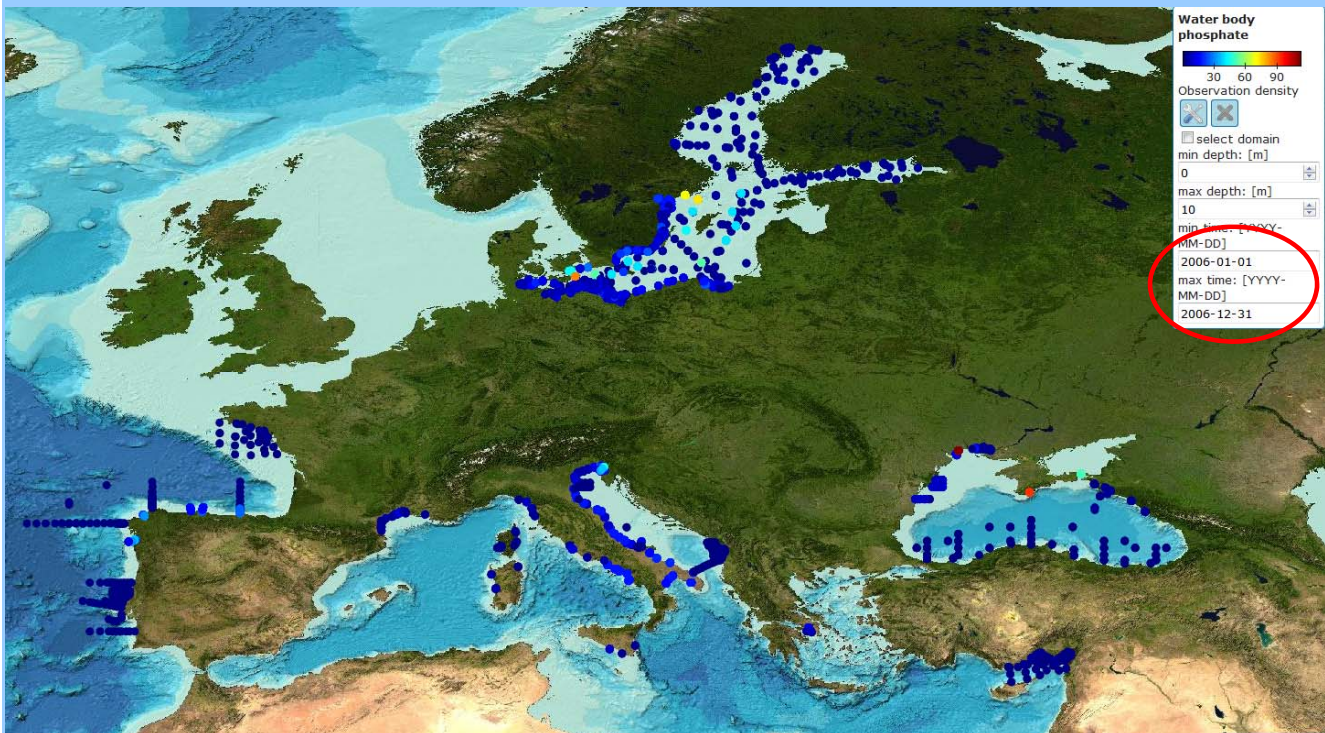

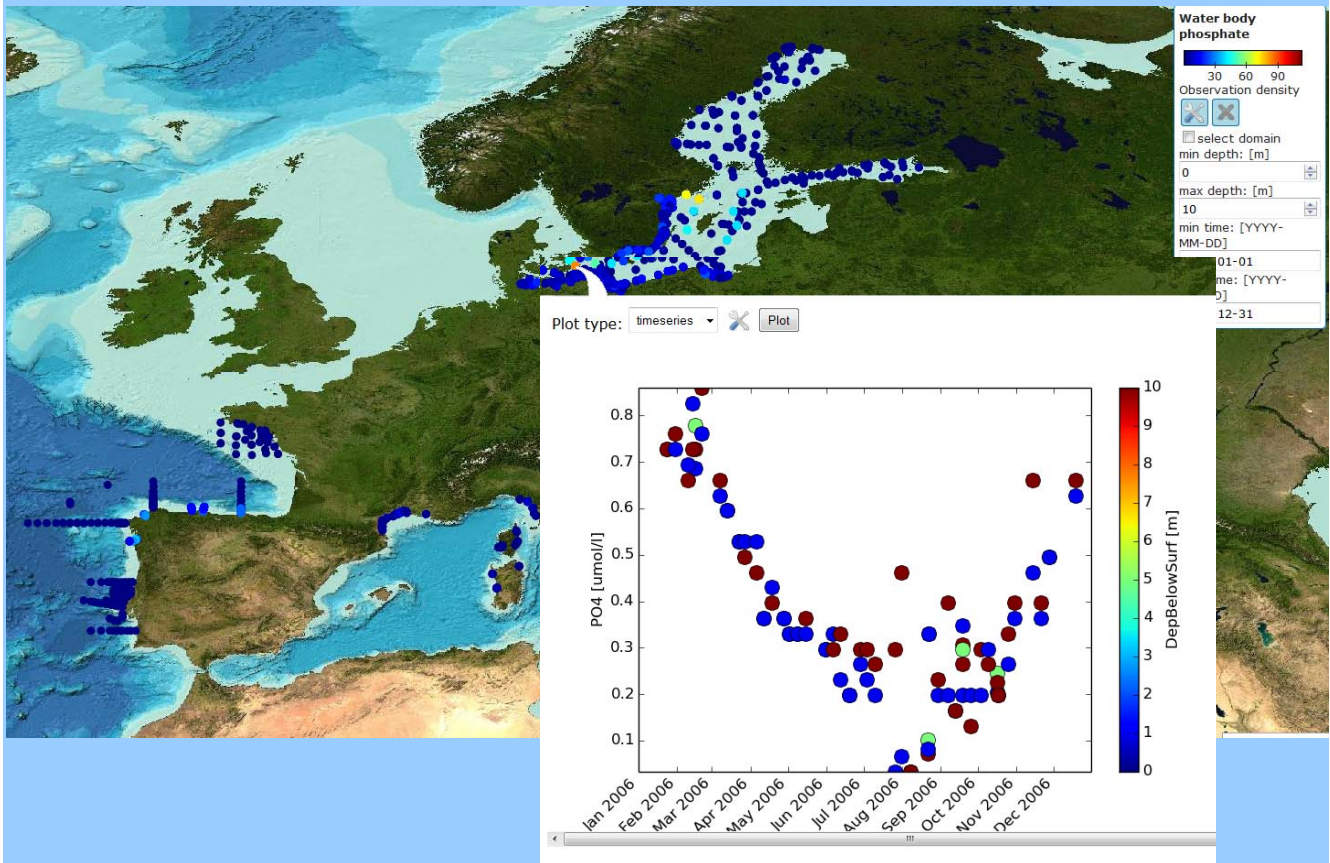

- Dynamic Plots: station maps, time series and vertical profiles **Organized by parameter group and parameter name (P35)**

2000

2006

All **activities** (data collection, data buffers generation, data buffers aggregation and validation, DIVA maps generation, integration of the viewing services) are **concatenated** → deadlines should be respected

Inputs from Expert WS will be important and needs to be fulfilled

**Requirements** raised during previous MSFD-EMODnet meeting have been **faced** during the last SC and some **updates have already planned** (matrix, include QC/QA information, identify data collection purpose, RSC sub-basins, unique identification for monitoring stations)

Definition of sub-contracts for **Crimean partners**
