Status update (on thematic)

- New data set on desalination
- Fishing intensity now also covering Atlantic Ocean and Baltic Sea
- Cables and wrecks received massive update thanks to SHOM data
- Shellfish farming data finally available for Spain
- Vessel density maps receiving increasing interest and citations
- MSP data set now including Belgium, Denmark, Finland (and Åland Islands), Latvia, Poland
- All other data sets receiving regular updates

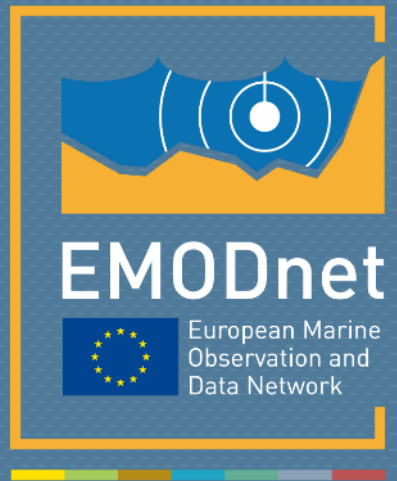

External interactions

- Ongoing cooperation with JRC on algae production facilities – the data set keeps receiving updates and additions (e.g. spirulina)
- Ongoing cooperation with TEG on data for MSP
- Cooperation with ICES for fishing intensity data
- Accidentally found that Frontex is using vesse density data – further enquiries on usage were unsuccessful
- Initial dialogue with the Aquaculture Advisory Council on “coherence of zones concerning shellfish farming” – Zoi is following up

Future Outlook

- Potential cooperation with Geo ANP in Brazil, through iAtlantic and Kate
- Hold usual meetings with RSCs
- Release new version of vessel density map method (this time with DOI)
- Keep “pushing” for MSP data
