Short demo

The screenshot shows a web browser window displaying the EMODnet Seabed Habitats application. The browser's address bar shows the URL www.emodnet-seabedhabitats.eu/default.aspx. The page header includes the EMODnet logo (European Marine Observation and Data Network) and the MESH MESH ATLANTIC logo. Below the header, there are navigation links: [map help](#), [new map query](#), [metadata search](#), [metadata catalogue](#), and [download map data](#).

The main interface is divided into a left sidebar and a central map area. The sidebar contains the following sections:

- Welcome** | **Map Layers** | **Key**
- Refresh Map** | **Remove Filters**
- Add layer(s) from other mapping portals**
- EUSeaMap: 2012-13 official top copies**
 - Habitat maps (EUNIS-based)**
 - Baltic Sea by energy (2012)
 - Baltic Sea by salinity (2012)
 - Biscay, Iberia, Azores & Eire (2013, MESH Atlantic)
 - Celtic & Greater North Seas (2012)
 - Western Mediterranean (2012)
 - Habitat maps (simplified classification)**
 - Categorised input physical data**
 - Confidence in boundaries (quantative)**
 - Confidence in boundaries (qualitative)**
- EUSeaMap: 2014-15 draft interim products**
- EUSeaMap: input physical data**
- EUNIS habitat maps from surveys**
- Other habitat maps from surveys**
- Modelled maps of specific habitats**

The central map area displays a satellite-style map of the Western Mediterranean region. A semi-transparent overlay shows the selected habitat map, with colors ranging from green to yellow, indicating different habitat types. The map includes a scale bar (500 km / 300 mi) and a toolbar on the right with the following options: **Pan**, **Zoom In**, **Zoom Out**, **Full Extent**, and **Download**.

At the bottom of the browser window, the status bar displays: **Scale = 1 : 28M** | **Right click on the map to query an object** | **30.83445, 59.47213** | **EPSG:4326**

- Download file and documentation- EUSeaMap Habitat Shapefile User Guide document - data model of the EUNIS Habitat maps
- done in the January of the 2015

EUSeaMap Habitat Shapefile User Guide: Habitat Map West Mediterranean Sea

1 Layer files

The layer file (20110209_EUSeaMap_WMediterranean_Habitats.lyr) associated with the shapefile (20110209_EUSeaMap_WMediterranean_Habitats.shp) uses the field "EUNISCombD" to plot the detailed habitat distribution in the Baltic Sea using the energy class as top level structure.

The layer file (20110209_EUSeaMap_WMediterranean_Habitats_grouped.lyr) associated with the shapefile (20110209_EUSeaMap_WMediterranean_Habitats.shp) uses the field "Grouped" to plot the simplified habitat distribution in the Baltic Sea.

2 Attribute table field description

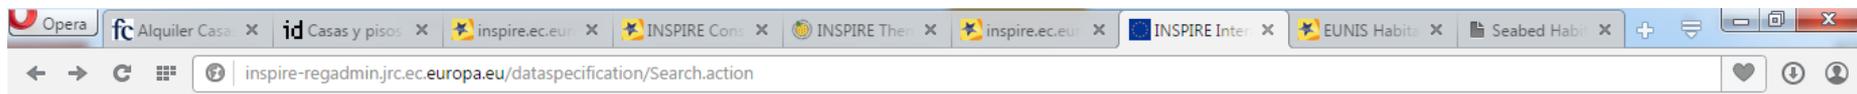

Table 1: Description of fields in the attribute table. The values in the last column are examples from the West Mediterranean Sea shapefile.

3	Shapefile heading	4 Description	5 Values/Reference	6 Example row from shapefile
	EUMRegion	EUSeaMap region	M for Mediterranean (see)	M
	AICode	Numerical code assigned by the model, by combining the following codes: BioCode, EnergyCode, BioCode, subcode and SalCode. This code could then be matched to a habitat type that is applicable to all EUSeaMap regions. (not used in this version.) #EnergyCode for the West Mediterranean is always 0.	For more details see Technical Appendix on Modeling.	40216
	ModelCode	Numerical code assigned by the model, by combining the following codes: BioCode, subcode and SalCode. This is then matched to a habitat type.	For more details see Technical Appendix on Modeling. See Table 2 for corresponding EUNIS Habitat codes and names.	210
	CodeX	In this shapefile it is the same as ModelCode	For more details see Technical Appendix on Modeling.	210
	biogreg	Biogeographic Region	Mediterranean	Mediterranean
	BioCode	Biogeographic Region Code – used in construction of AICode (1 st digit)	4	4
	substrate	Substrate type as used in the EUNIS (EUNIScombD) and detailed (Alcombdes) habitat names.	See Table 3	Rock or other hard substrate
	subcode	Substrate type code – used in construction of ModelCode (3 rd digit)	See Table 3	1
	SubGroups	Broad substrate type	bedment, Rock and biogenic reef or Sealed. See Table 3	Rock or biogenic reef
	SubGrpPlu	Substrate type as used in construction of the simplified habitat names (Grouped)	See Table 3	Rock or biogenic reef
	biocene	Biological zones as used in the EUNIS (EUNIScombD) and detailed (Alcombdes) habitat names.	See Table	Upper Circalibral
