

# *The EuSeaMap project, for a large scale cartography of European seabeds*

## *Definition of the process to model habitat distribution in the western Mediterranean*

**Leonardo Tunesi, Sabrina Agnesi, Giulia Mo**  
*3rd Department ex-ICRAM "Marine Habitats and Biodiversity Protection"*

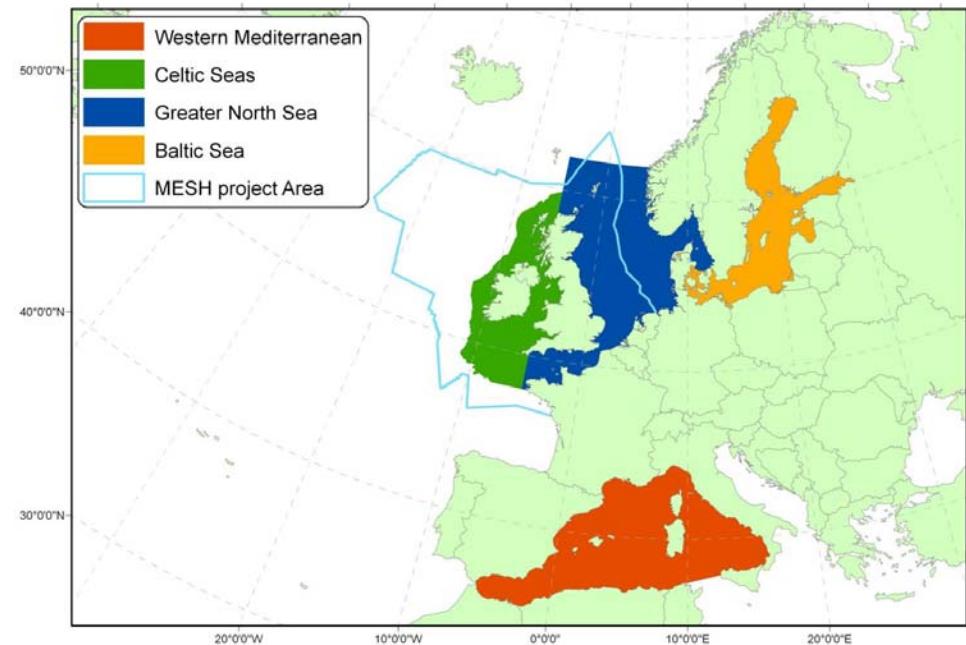

**ISPRA**

Istituto Superiore per la Protezione  
e la Ricerca Ambientale

## ***EuSeaMap project contract MARE/2008/07*** **- Overall objective -**

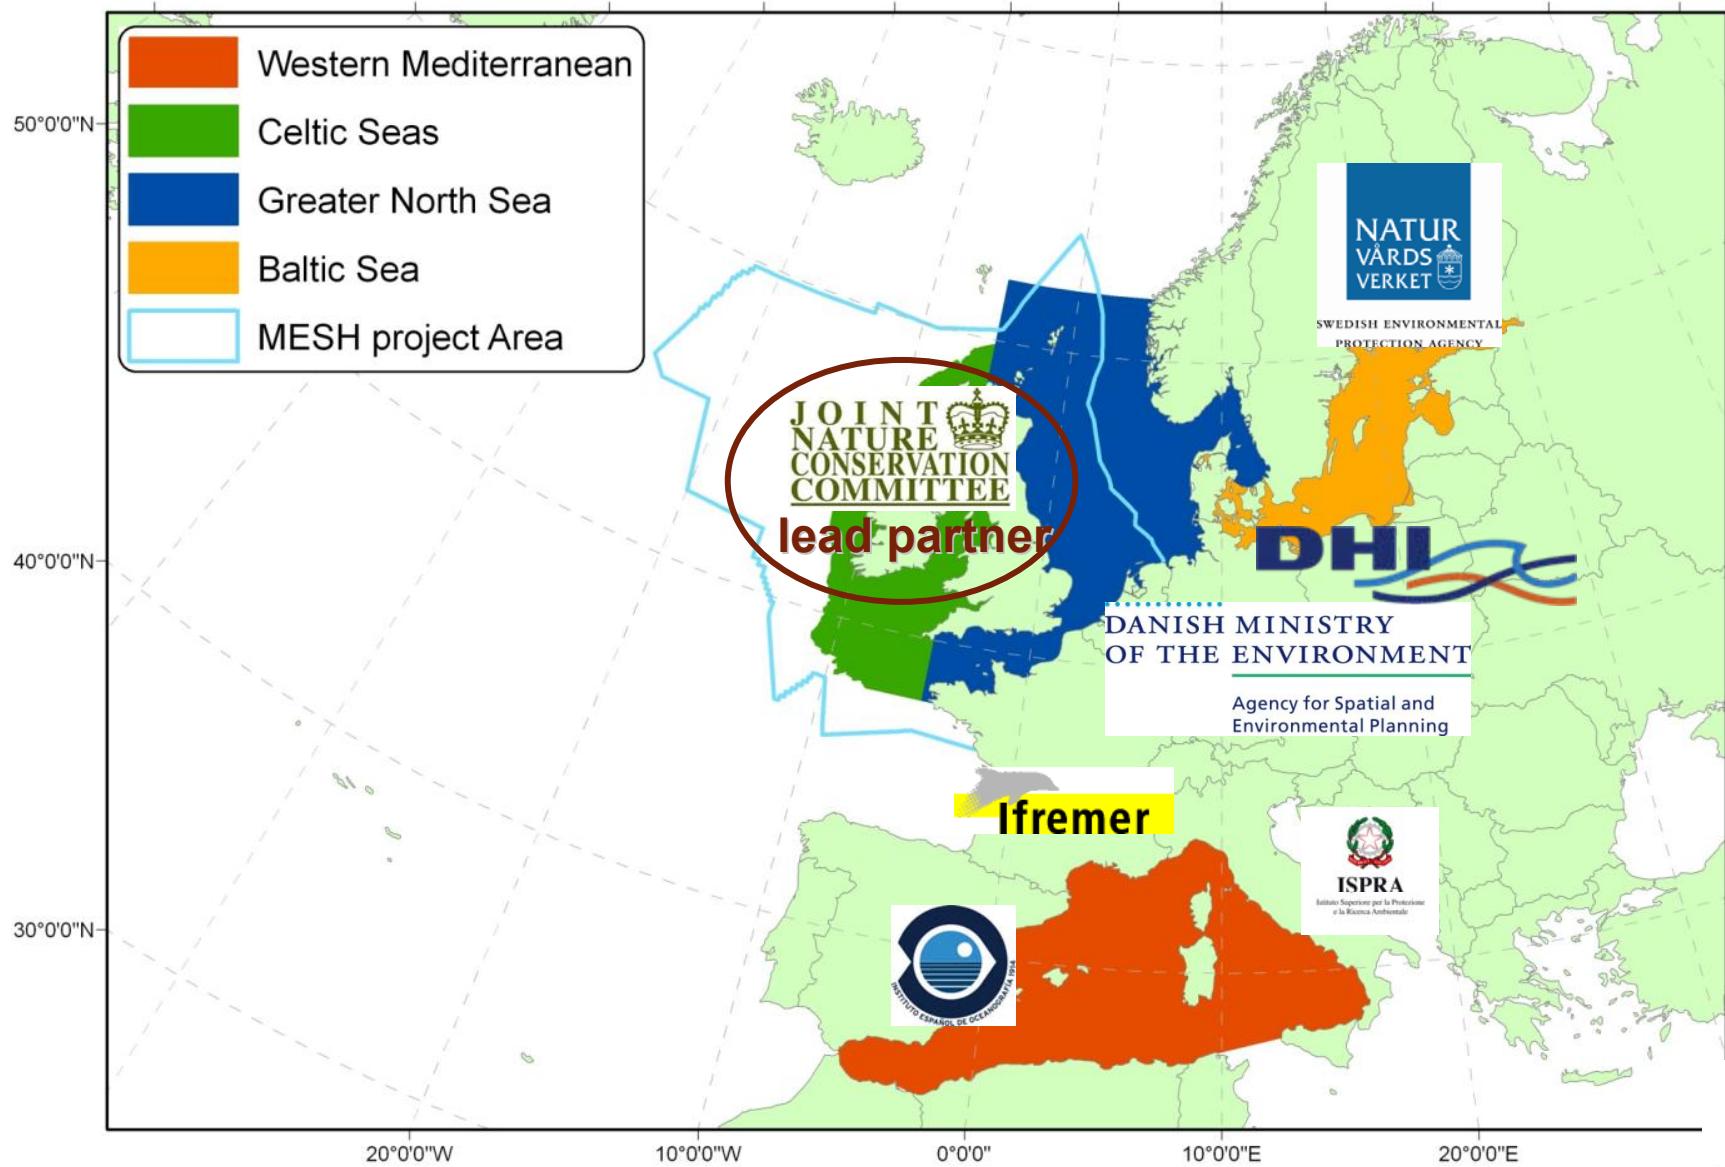

To provide **broad-scale maps of seabed habitats**, using common functional mapping methods, for the

- *Baltic Sea*
- *Greater North Sea*
- *Celtic Seas*
- *Western Mediterranean*

and to determine what further steps are required to improve their usefulness and coverage

# Partners of the project

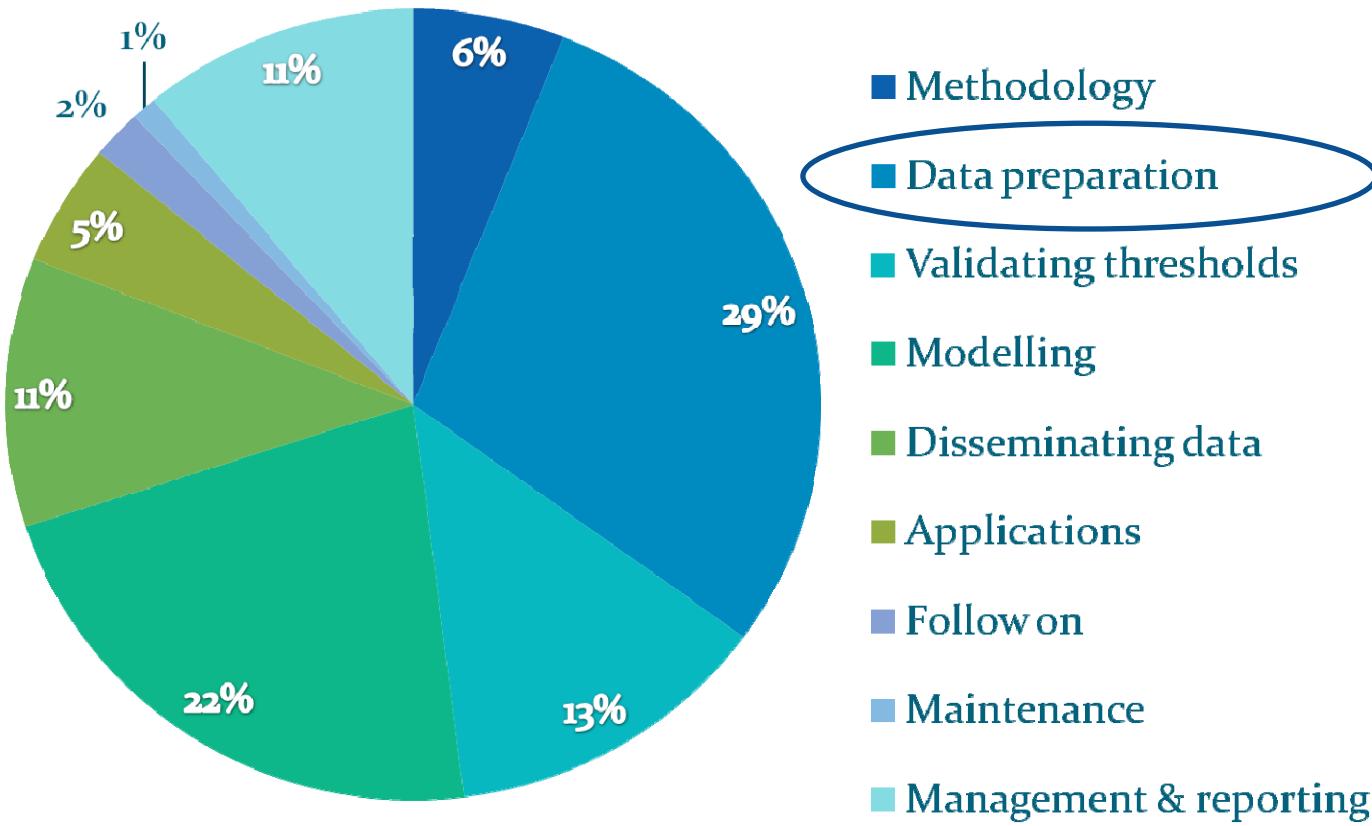

## ***EuSeaMap project - Specific objectives***

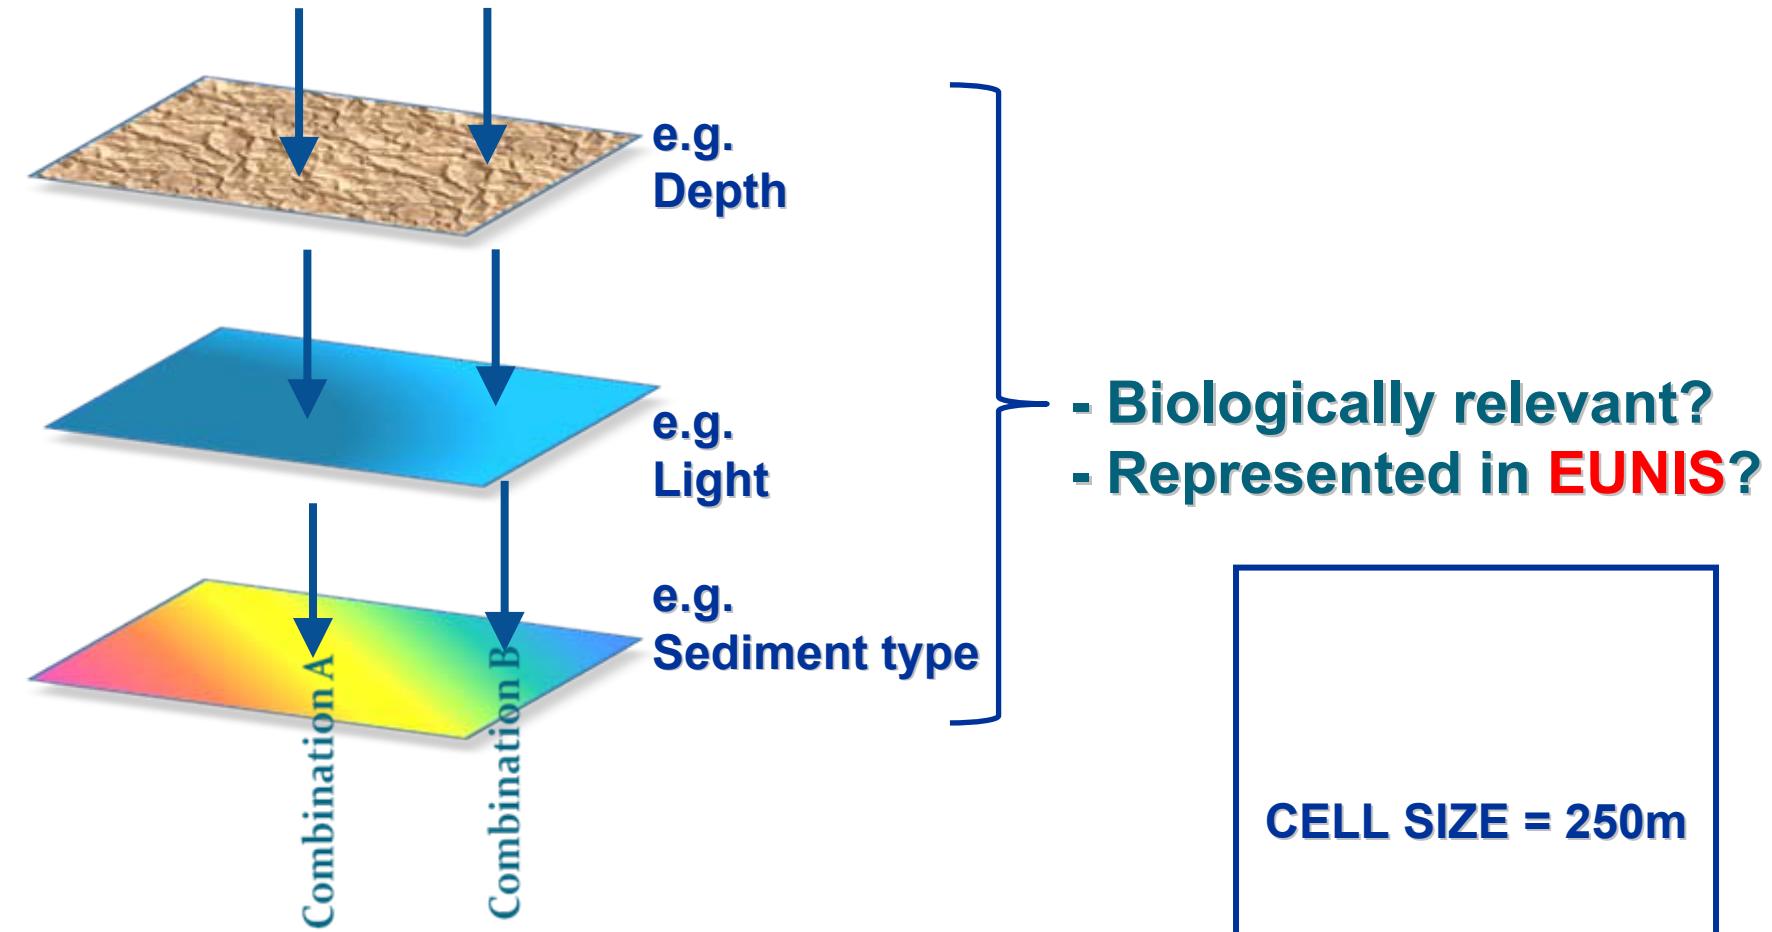

- 1. Review existing broad-scale marine habitat mapping efforts***
- 2. Prepare a broad-scale seabed habitat map***
- 3. Make data available online***
- 4. Assess benefits***
- 5. INSPIRE implementation***
- 6. Assess next steps***
- 7. Maintenance***

## Work packages

## Modelling approach

schematic example with 3 physical data layers

# What is EUNIS?

The EUropean Nature Information System includes a habitat classification (<http://eunis.eea.eu.int/habitats-code-browser.jsp> )

- **Content:** to be a reservoir of information on environmentally important matters in Europe
- **Tools:** to facilitate use of data by promoting harmonisation of terminology and definitions

## Aims

- provide a “common language” for reporting on habitats
- enable mapping of units at a regional level by encompassing habitats from all biomes (terrestrial, freshwater, marine)
- comprehensive and applicable at different levels of complexity
- allow aggregation, evaluation and monitoring of habitat units
- provide a common framework: new information and links to other classifications

## Principles of the EUNIS classification

- Hierarchical (currently goes up to 6 levels of hierarchy)
- Units at a given hierarchical level to be of similar importance
- Clear criteria for each division to level 3
- Units at level 4 and below follow criteria of higher levels
- Logical sequence of units
- Use clearly defined non-technical language
- Ecologically distinct habitat types supporting different plant and animal communities should be separated
- Habitats from different locations differing on the basis of geographical range only should not be separated
- Habitat units and habitat complexes are separated

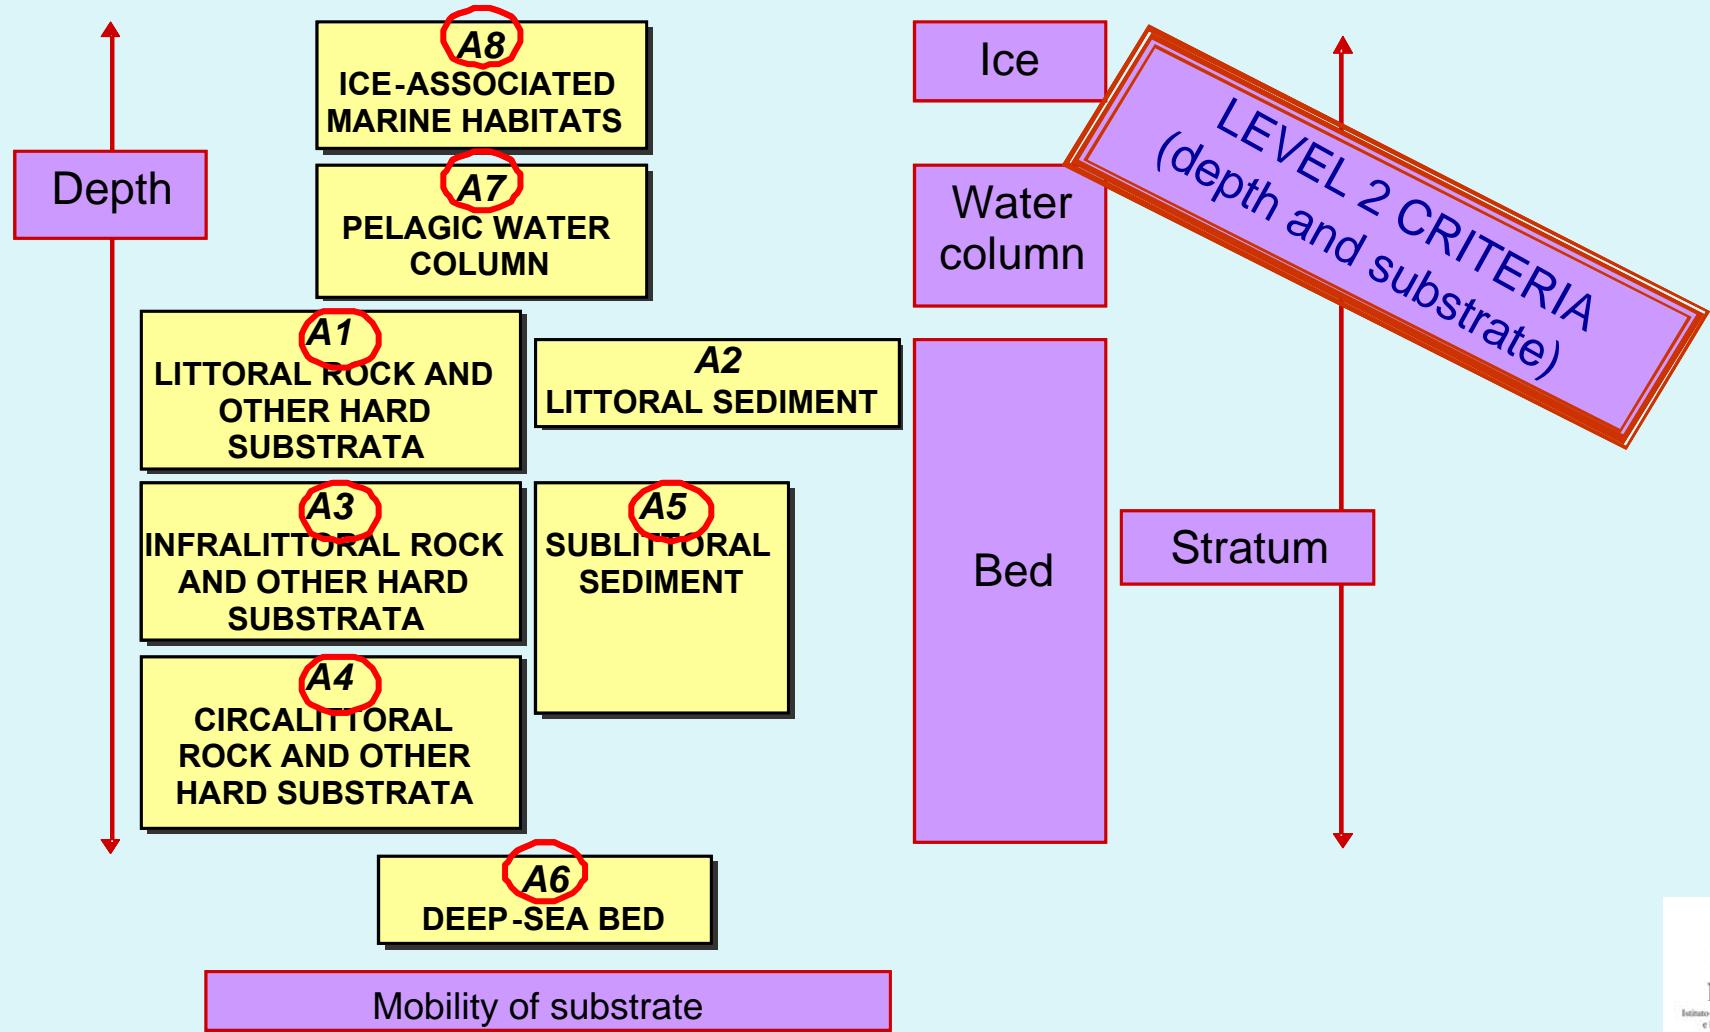

The classification has an hierarchical structure. There are 10 Level 1 units. X units are habitat complexes comprising components of several habitat types operating as a connected ecosystem.

## LEVEL 1: ENVIRONMENT TYPE (A-J, X)

|   |  |   |  |   |
|---|--|---|--|---|
| A<br><b>MARINE</b>                      | B<br><b>COASTAL HABITATS</b>                       | C<br><b>INLAND SURFACE WATERS</b>                             | D<br><b>MIRES, BOGS AND FENS</b>   | E<br><b>GRASSLANDS AND LANDS DOMINATED BY FORBS, MOSES OR LICHENS</b> |
| F<br><b>HEATHLAND, SCRUB AND TUNDRA</b> | G<br><b>WOODLAND, FOREST AND OTHER WOODED LAND</b> | H<br><b>INLAND UNVEGETATED OR SPARSELY VEGETATED HABITATS</b> | I<br><b>REGULARLY OR RECENTLY CULTIVATED AGRICULTURAL, HORTICULTURAL AND DOMESTIC HABITATS</b> | J<br><b>CONSTRUCTED, INDUSTRIAL AND OTHER ARTIFICIAL HABITATS</b>     |
| <b>X      HABITAT COMPLEXES</b>         |  |   |  |   |

## LEVEL 2 : MARINE HABITAT UNITS (1 -8)

## LEVEL 3: MARINE HABITAT UNITS (156)

### Examples:

A1

- Ø A1.1 High energy littoral rock
- Ø A1.2 Moderate energy littoral rock
- Ø A1.3 Moderate energy littoral rock

A2

- Ø A2.1 Littoral coarse sediment
- Ø A2.2 Littoral sand and muddy sand
- Ø A2.3 Littoral mud

A3

- Ø A3.1 Atlantic and Mediterranean high energy infralittoral rock
- Ø A3.2 Atlantic and Mediterranean moderate energy infralittoral rock

A4

- Ø A4.1 Atlantic and Mediterranean high energy infralittoral rock

LEVEL 3 CRITERIA  
(abiotic parameters)

Substrate

Energy

Temperature

Light

Salinity

Vegetation

# Mediterranean benthic habitats have been incorporated into EUNIS (ISPRA activity within ETC/BD consortium)

**Mediterranean**

UNEP (OCA)/MED WG 149/5  
Rev.1

| Zone          | Tot. # of Bioceonosis | Tot. # facies/assemblages |
|---------------|-----------------------|---------------------------|
| Supralittoral | 4                     | 7                         |
| Mesolittoral  | 6                     | 19                        |
| Infralittoral | 9                     | 65                        |
| Circalittoral | 8                     | 34                        |
| Bathyal       | 4                     | 5                         |
| Abyssal       | 1                     |                           |
| <b>Total</b>  | <b>32</b>             | <b>130</b>                |

| EUNIS LEVEL  | TOTAL n. habitats |
|--------------|-------------------|
| A1           | 22                |
| A2           | 9                 |
| A3           | 37                |
| A4           | 23                |
| A5           | 59                |
| A6           | 9                 |
| B2           | 1                 |
| B3           | 2                 |
| <b>TOTAL</b> | <b>162</b>        |

## Habitats / Biological communities considered for the Mediterranean

### 1. Identification of relevant habitats / communities to be modeled for the Mediterranean

- Mediterranean benthic habitats present in EUNIS were screened based on their representativity in a 250m cell size
- Results of screening: ≈20 habitats that may be mapped through modeling in EUSeaMap

### 2. Threshold identification

- Identify (through published data) the physical thresholds (light, energy, bathymetry, substrate) for each of the above in order to attempt mapping.  
OR,
- Identify (through existing cartographies) the respective light and energy threshold values obtained from modeled light and energy layers.
- If thresholds are not identifiable, revert to broader scale EUNIS categories

## Habitats that may be mapped through modeling in EUSeaMap

| EUNIS Habitat code | EUNIS Lev. | Eunis name   |
|--------------------|------------|--|
| A3                 | 2          | Infralittoral rock and other hard substrata                                      |
| A5.23              | 4          | Infralittoral fine sand  |
| A5.51              | 4          | Maerl beds (Infralittoral and Circalittoral)                                     |
| A4                 | 2          | Circalittoral rock and other hard substrata                                      |
| A4.26D             | 5          | Coralligenous platforms  |
| A4.27              | 4          | Faunal communities on deep moderate energy circalittoral rock                    |
| A5.39              | 4          | Mediterranean biocoenosis of coastal terrigenous muds                            |
| A5.38              | 4          | Mediterranean biocoenosis of muddy detritic bottoms                              |
| A5.46              | 4          | Mediterranean biocoenosis of coastal detritic bottoms                            |
| A5.47              | 4          | Mediterranean communities of shelf-edge detritic bottoms                         |
| A5.471             | 5          | Facies with [Neolampas rostellata]   |
| A5.472             | 5          | Facies with [Leptometra phalangium]  |
| A5.14              | 4          | Circalittoral coarse sediment  |
| A6.51              | 4          | Mediterranean communities of bathyal muds  |
| A6.511             | 5          | Facies of sandy muds with [Thenea muricata]                                      |
| A6.512             | 5          | Facies of fluid muds with [Brissopsis lyrifera]                                  |
| A6.513             | 5          | Facies of soft muds with [Funiculina quadrangularis] and [Apporhais seressianus] |
| A6.514             | 5          | Facies of compact muds with [Isidella elongata]                                  |
| A6.31              | 4          | Communities of bathyal detritic sands with [Grypheus vitreus]                    |
| A6.52              | 4          | Communities of abyssal muds  |

## Data types needed

| Data type                     | Baltic | North | Celtic | W Med |
|-------------------------------|--------|-------|--------|-------|
| <i>Sediment</i>               | ✓      | ✓     | ✓      | ✓     |
| <i>Bathymetry</i>             | ✓      | ✓     | ✓      | ✓     |
| <i>Light</i>                  | ✓      | ✓     | ✓      | ✓     |
| <i>Wave energy at seabed</i>  | ✓      | ✓     | ✓      | ✓     |
| <i>Tidal energy at seabed</i> | ✓      | ✓     | ✓      | ✓     |
| <i>Salinity at seabed</i>     | ✓      | ✓     | ✓      |       |
| <i>Temperature at seabed</i>  | ✓      | ✓     | ✓      | ✓     |
| <i>O2/POC/Chl</i>             | ✓      | ✓     |        |       |
| <i>Ice cover</i>              | ✓      |       |        |       |
| <i>Stratification</i>         | ✓      | ✓     |        |       |

✓ = data to be delivered by the preparatory action of EMODNET project

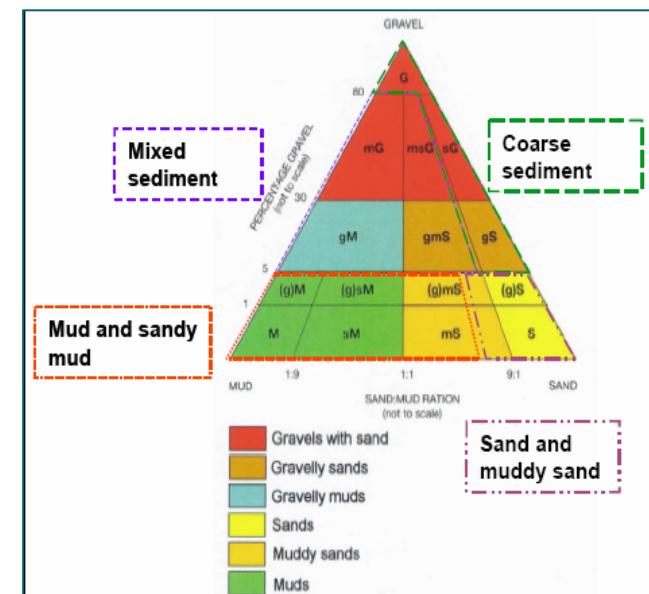

## Data preparation in which ISPRA is involved

### Sediments:

- collection of cartographic sediment data on national scale
- harmonization of sediment categories to fit into unique matrix

| area     | source                   | original classification            |
|----------|--------------------------|------------------------------------|
| Liguria  | Quaderno Icram Liguria   | Folk e ward semplificata           |
| Toscana  | GIS natura               | non segue classificazione standard |
| Lazio    | GIS natura               | Nota                               |
| Campania | CARG                     | Folk e ward semplificata           |
| Calabria | GIS natura               |                                    |
| Sardegna | carta posidonia sardegna | derivata da carta biocenotica      |

### Bathymetry:

- Conversion of IIMM bathymetric maps into raster format
